

ANUDEEP KADAVERGU

Data Engineer | Data Platform & Distributed Pipelines (GCP, Azure)
📞 +91 9989227541 ✉ anudeepkadavergu@gmail.com [🌐 LinkedIn](#) [🐙 GitHub](#)

Summary

Senior Data Engineer with 5 years building and scaling distributed data platforms and pipelines on GCP and Azure. Architected a reusable, configuration-driven Dataflow ingestion framework adopted across 6+ enterprise data products, cutting ingestion latency 40% and infra cost 30% at billion-record scale (1.2B+ records, 18+ BigQuery tables). Deep expertise in streaming and batch data architecture (Apache Beam, Kafka/Confluent, Spark, DBT), secure enterprise data integration (Kerberos, HashiCorp Vault, IAM), and CI/CD-driven infrastructure-as-code (Terraform, Harness). Known as a builder who takes systems from design to production: owns architecture decisions end-to-end, mentors engineers through supporting them in day-to-day activities and onboarding playbooks, and is now extending the platform with AI-assisted data discovery and self-healing pipeline operations.

Technical Skills

Languages: Python, Java, Scala (working), SQL, C, PHP, JavaScript

Big Data & Distributed Processing: Apache Beam, Google Dataflow, Apache Spark (PySpark), Apache Kafka, Confluent, DBT

Data Architecture & Modeling: BigQuery, Data Warehousing, Delta Lake concepts, ETL/ELT design, Data Lineage (Dataplex), Data Quality & Validation Frameworks

Orchestration: Cloud Composer (Airflow), Cloud Build, EventArc, Pub/Sub

Cloud Platforms: GCP (Compute Engine, BigQuery, Cloud Run, GKE, Cloud Storage, Cloud SQL, Pub/Sub, Composer, Dataflow), Azure (Databricks, Data Factory, Data Lake, HDInsight, AKS, DW)

Databases: Azure SQL Server, MySQL, PostgreSQL, MongoDB, InfluxDB

Security & Governance: HashiCorp Vault, Kerberos Authentication, Enterprise IAM, OIDC

CI/CD & Infrastructure-as-Code: Terraform, Harness, Jenkins, GitHub Actions, ArgoCD, Docker, Kubernetes, Spinnaker, Backstage (IDP)

AI-Assisted Engineering & Agentic Tools: Google ADK, Cortex AI, GitHub Copilot, Microsoft Copilot

Web & Analytics: React, Flask, Django, FastAPI, D3.js, Plotly, Highcharts, Amcharts, Dash

Experience

Lloyds Technology Centre

June 2024 – Present

Senior Data Engineer

Hyderabad, Telangana

- Own end-to-end delivery of 6+ enterprise data products on GCP, architecting large-scale full and delta ingestion pipelines processing 1.2B+ records across 18+ BigQuery tables.
- Designed and built a reusable, configuration-driven Generic Dataflow Framework that standardized onboarding for multiple data products, improving ingestion performance 40% and cutting infrastructure cost 30%.
- Delivered the platform's first Cloud Composer (Airflow) implementation, orchestrating multi-source, parallel DAG pipelines with Java-based delta-change handling.
- Architected GCP 2.0/IDP-aligned event-driven ingestion patterns using Cloud Run, Composer, Pub/Sub, EventArc, and BigQuery, moving the platform toward a serverless, streaming-ready architecture.
- Built secure, Kerberos-authenticated SQL Server-to-BigQuery ingestion pipelines using HashiCorp Vault and enterprise IAM controls, meeting bank-grade data security and compliance requirements.
- Led migration of 23+ CI/CD pipelines (Dataflow, DBT, Docker, Maven, Gradle) from Jenkins to Harness, and automated BDD test execution/reporting via OIDC authentication and SAR-based reporting, cutting manual testing effort 90%.
- Designed an AI-powered Intelligent Data Discovery Agent using Google ADK, Cortex AI, Dataplex, and BigQuery Lineage, and proposed follow-on AI initiatives (self-healing pipeline operations, AI-assisted BDD generation, requirements-to-code agents).
- Adopted GitHub Copilot and Microsoft Copilot across the team's engineering workflow to accelerate pipeline development, code review, and documentation.
- Authored enterprise onboarding playbooks, migration guides, and QA automation strategy (XRAY integration, BDD-gated releases, regression automation, flaky-test quarantine), adopted across multiple teams.
- Built scalable GCP infrastructure-as-code with Terraform (service projects, subnets, namespaces, CI/CD pipelines via IDP Golden Path) and automated sandbox environment provisioning for engineering teams.
- Mentor engineers through code review, leading Golden Path deployment POCs and guiding teams through Terraform infra setup, pipeline generation, and Harness execution; reviewed and approved critical PRs across Cloud Identity, Networking, and Controls Shared Library.
- Contributed to Disaster Recovery planning for GKE clusters, defining cross-region failover and connectivity strategy.

NCR Voyix

December 2021 – June 2024

Data Engineer II

Hyderabad, Telangana

- Built Kafka-based streaming pipelines (Confluent) on containerized infrastructure (Docker, Kubernetes) to ingest and transform data from on-premise databases into Azure Data Warehouse.
- Implemented batch and streaming ETL pipelines using Azure Databricks, Azure Data Factory, and Apache Kafka on HDInsight to ingest data from APIs and on-premise sources.
- Built CI/CD pipelines for infrastructure provisioning and deployment on Azure using Jenkins and GitHub Actions, including a daily master build running functional, integration, and performance tests for all data pipelines.
- Owned an automation framework (python-behave) for data pipeline testing, plus internal tooling: a pipeline code generator, schema comparison tool, and kSQL unit test runner.
- Designed and built a full-stack analytics application (React front end, Python/FastAPI backend, D3.js visualizations) serving data warehouse analytics to external users, deployed on Kubernetes.
- Developed BI reporting and dashboards using Power BI, Highcharts, Amcharts, and Plotly.

Infosys

January 2021 – December 2021

Digital Specialist Engineer

Hyderabad, Telangana

- Built a data migration pipeline moving on-premise data files into Azure Data Lake using Data Factory and Databricks, with Scala transformation scripts for schema conformance.
- Developed Data Factory pipelines to fetch data daily from an FTP server into Azure Blob Storage based on file-modification tracking.
- Built an analytics dashboard using Python (Flask) and Highcharts.

Internship

Technical Intern - IT | Synopsys Inc

February 2020 - January 2021

- Built a migration-management portal for an MDM transition (MobileIron to MS Intune), including scheduled email automation and a user feedback module.
- Built an interactive office inventory web app (PHP, AJAX, SQL) with full CRUD operations, hosted on Windows Server 2012 R2.
- Built an employee-ticket analytics dashboard using Dash (Flask) and Plotly with interactive callback-driven data retrieval.

Application Development | IEEE

October 2018 - June 2019

- Built a web application (PHP, AJAX) to automate final-year college project management, including an integrated student-teacher chat module, still in active use.

Awards/Achievements

- Ranked 3152 out of 55,654 participants in CodeVita Season 8.
- Python Certification, DataCamp.
- Coordinator, computer science department technical association (CETA).
- Built the college's Center for Cyber Security website.
- Contributed to Engineering Projects in Community Service (EPICS) initiatives.

Participations

- Built a web portal for GHMC garbage maintenance at the Telangana Hackathon; certificate of achievement.
- Workshops: Big Data Analytics (Lead India AI), IBM WorkLight Plugin (IBM, VMEG), e-Hack (SytechLabs, OU).

Education

Vardhaman College of Engineering

June 2016 – June 2020

Bachelor of Technology in Computer Science (CGPA: 9.19)

Hyderabad, Telangana

SR Junior College

June 2014 – June 2016

Intermediate - MPC (Percentage: 98.7)

Karimnagar, Telangana

Languages

- English, Telugu, Hindi
